

# Update Google Chrome

To make sure you're protected by the latest security updates, Google Chrome can automatically update when a new version of the browser is available on your computer, Android device, iPhone, or iPad. With these updates you might sometimes notice that your browser looks different.

## Get a Chrome update when available

Chrome should automatically update on your computer, and based upon your Android Play Store or iOS App Store settings. Learn how to check if updates are available and how to update Chrome.

### Computer

Normally updates happen in the background when you close and reopen your computer's browser. But if you haven't closed your browser in a while you might see the Chrome menu in the top right change colors:

-  A green menu means an update's been available for 2 days.
-  An orange menu means an update's been available for 4 days.
-  A red menu means an update's been available for 7 days.

To update Google Chrome:

1. In the top right, click the Chrome menu .
2. Click **Update Google Chrome**. If you don't see this button, you're on the latest version.
3. Click **Relaunch**.

The browser saves your opened tabs and windows and reopens them automatically when it restarts. If you'd prefer not to restart right away, click **Not now**. The next time you restart your browser, the update will be applied.

### Android device

### iPhone or iPad device

Chrome should automatically update based upon your iOS App Store settings. You can check if there's a new version available:

1. Open the App Store.
2. Touch **Updates**.
3. If you see Chrome  in the list, touch **Update** to install.
4. If asked, enter your Apple ID password. The updates will download and install.
